

Average Seasonal Price (ASP™) Contract

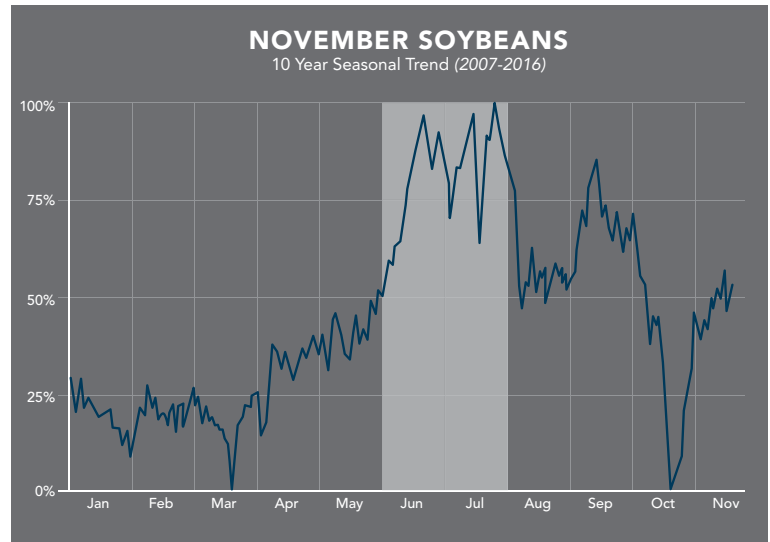

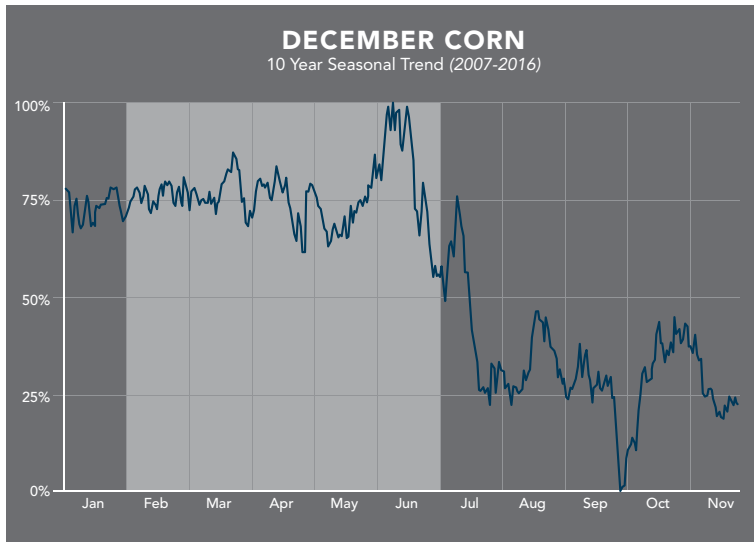

Sell your corn and soybeans during a proven time period.

As someone who keeps an eye on the market, it's no secret that prices have been historically better at some times of the year than others. With the ASP™ Contract, you get to take what we've learned from the past and put it to work going forward, where seasonal pricing opportunities may exist.

Background

Take a look at how the ASP pricing windows have helped capture historic seasonal price premiums of new crop corn and soybean futures prior to harvest.

Past performance is not indicative of future results. ADM does not warrant this information to be free of omissions and errors.

Here's How It Works

- 1) You enroll a portion of your production before the pricing period begins.
- 2) When the pricing period concludes, your ASP Futures Reference Price is established. You decide when to set the basis.
- 3) You deliver your grain and receive a final price. The final price is the **ASP Futures Reference Price +/- Basis - Service Fee.**

Note: Specific dates fluctuate on an annual basis. For current dates, talk to your local merchandiser.

The Benefits

- > You still get to set the basis.
- > It helps diversify your marketing plan.
- > It provides a challenging benchmark for the rest of your marketing.
- > It automatically executes for you, minimizing stress and worry.

Performance

Compare how ASP performs relative to the harvest price and overall market opportunity. See your local ADM Originator for detailed historic performance results.

In order to see maximum results from the ASP Contract, we encourage you to participate consistently on an annual basis, enrolling the same percentage of production from year to year.
